# Updating the IPv6 ICT tender guidance

## Overview

- Original publication was RIPE-501 in November 2010, which was updated to RIPE-554 in June 2012.
- Is there agreement to progress a –bis version now? Eight years have passed, people ask for guidance...
- Should we keep the scope to (largely) enterprise or expand it? If so, to what?
- Is the linkage to the IPv6 Ready Logo programme still desired?
- Are there new classes of equipment to add, e.g. IoT/low power, WiFi controllers, ...?
- Are specific sections outdated, or are there significant new sections to add?
- Should we add guidance on applying the content to different use cases? Separate docs? Appendices?

**There is a PDF snapshot of the Google doc we're using for –bis edits available at:**

- [https://go6.si/wp-content/uploads/2020/10/RIPE554-bis-v\\_01.pdf](https://go6.si/wp-content/uploads/2020/10/RIPE554-bis-v_01.pdf)
- For now, please comment to the list at [ipv6-wg@ripe.net](mailto:ipv6-wg@ripe.net) or contact the author team at [554-bis@go6.si](mailto:554-bis@go6.si)
